PROPER WARM / PROPER NORTH HOMES

Warmer homes.
Greater delivery confidence.

A safer path from approved investment
to resident-ready outcomes.

Executive introduction | 20 minutes

The case combines a real business need with an unproven answer.

THE CONTEXT

A fictional northern housing association with 60,000 homes.

THE PRESSURE

Delivery behind plan, with safety, funding and 2030 urgency.

THE REQUESTED ANSWER

Five-agent design; double delivery; GBP 40m and lower bills.

The need is credible. The proposed answer and quantified value are not yet proven.

We challenged the answer before selling the solution.

OUTCOME	Accepted, evidence-complete handovers; not agent activity.
AUTHORITY	AI assists. Named people retain approval.
VALUE	Separate retrofit capital from technology value.
DECISION	Readiness and gated pilot; not portfolio rollout.

GBP 40m unverified | Sector benchmarks, not company facts | Bills may not fall

These clarifications are the rules for reading the business presentation

One home can be complete in every system and unfinished for the resident.

Understand

What will change?

Decide

What are my choices?

Prepare

Who is coming, and when?

Live with it

Who helps if it does not work?

Behind the journey: housing, surveyors, finance, contractors and quality teams.

When ownership is unclear, the resident inherits the uncertainty.

THE CASE AT A GLANCE

The ambition is clear.
The delivery baseline is not.

60,000

homes in the portfolio

Stated fictional context

15,600

homes below EPC C in the scenario

26% sector benchmark; not verified company data

3,900

accepted completions per full delivery year

Four-year arithmetic; not current throughput

Current safety duties cannot wait for a new digital platform.

Faster administration is not necessarily faster retrofit.

The programme moves only when every critical constraint is ready.

Property data	Competent people	Committed suppliers	Resident readiness	Affordable funding

AI can reduce evidence chasing.
It cannot create an installation crew or approve a resident's choice.

THE PROPOSITION

One governed journey.
Not five autonomous decision-makers.

Trusted evidence

What is known?
What is missing?

Named owners

Who decides?
Who owns the gap?

Next safe step

Proceed, pause
or resolve?

Connect existing services. Use AI only where it earns its place.

Remove avoidable waiting. Keep accountable judgement.

FROM: CHASING STATUS

Find the latest evidence.
Ask who owns the gap.
Reconcile the report again.

TO: RESOLVING THE NEXT DECISION

Review sourced evidence.
Resolve the named exception.
Report outcomes and holds.

A missing approval creates a hold and a human task, not an AI guess.

Resident trust is a delivery outcome.

01 Clear choices

Accessible information and time to consider discretionary measures.

02 Reliable appointments

Real capacity, agreed adjustments and honest updates.

03 A usable home

Quality checks, practical handover and follow-up on comfort.

04 A person who can help

Human review, aftercare and complaint routes without detriment.

Measure comfort and affordability. Do not promise every bill will fall.

ILLUSTRATIVE ECONOMICS, NOT A BUDGET

The financial case starts with capital discipline.

GBP 312m gross

15,600 homes x GBP 20,000
Cost inclusions require validation

GBP 117m grant ceiling

Full-cap scenario only.
Not an allocation or entitlement.

GBP 195m provider balance

Even at that ceiling, provider funding is substantial.
Cash timing and headroom still govern delivery.

The separate GBP 40m opportunity is unverified. Do not add it to the ceiling.

All figures use provisional inputs; GBP 7,500 ordinary cap | BRD: illustrative economics

FOUR OUTCOMES THE EXECUTIVE TEAM CAN TEST

Value must be earned, not assumed.

CAPACITY RELEASED

Less chasing.
More professional judgement.

CAPITAL BETTER CONTROLLED

Fewer avoidable costs.
Clearer cash exposure.

RESIDENT OUTCOMES IMPROVED

Reliable service.
Comfort and affordability.

QUALITY MADE VISIBLE

Accepted work.
Earlier defect containment.

Value = attributable improvement over a credible alternative, net of all added costs.

STAGED COMMITMENT, NOT A BIG-BANG ROLLOUT

Prove the model before committing to scale.

0

Establish readiness

6-8 weeks proposed

1

Shadow mode

No live actions. Test options.

2

Bounded live pilot

6-9 months proposed

3

Repeat schemes

By archetype or geography.

4

Selective scale

Release the next tranche.

Every step needs evidence and named approval. Calendar progress is not permission.

Indicative phases and durations; ratify during readiness | BRD: delivery gates and BR-050

PROPOSED PILOT SCORECARD

Scale only when the evidence supports it.

50+

accepted handovers from 80-100 candidates

20%

lower assessment-to-ready-to-install time

25%

less coordination effort per accepted home

Safety, resident rights and affordability are non-negotiable.

Ratify targets and baselines first. Count review effort, defects and incomplete cases.

THE DECISION TODAY

Approve the next evidence-building step.

AUTHORISE	A capped readiness stage; agree its budget and boundaries.
ASSIGN	An asset sponsor and accountable cross-functional owners.
RETURN	With validated options, economics and a gated pilot case.

Next: how the architecture enables this service, then a property-journey demo.
