Back the evidence. Keep the resident promise.

60,000 homes.

Safe, resident-accepted handovers.

Real service proof now.

Human and value gates next.

TODAY'S DECISION

Endorse the next acceptance-and-value proposal.

Proposal only — no new spending or production authority.

Five pressure points. One accepted home.

Choose homes	Assess & design	Prepare funding	Coordinate works	Verify & hand over
Prioritisation	Assessment	Evidence	Delivery	Quality

Safe + resident-accepted + evidence-complete

Measure accepted outcomes, not messages or drafts.

Each request needs rules, people and bounded AI.

Rules

Gates, clocks, eligibility, versions.

People

Policy, consent, professional and financial decisions.

Bounded AI

Reconcile, prepare, draft, flag.

Eight role-agent research instruments — not employee interviews.

Fix the prerequisite before adding the assist.

Rank homes

Approved policy
+
sourced facts.

Offer a slot

Committed capacity
+
resident choice.

Draft funding

Accepted evidence
+
separate ledger states.

A slot is not consent. A form is not funding.

Change the handoffs, not the whole company.

KEEP

Teams, suppliers,
useful systems.

ADD

One case, owned transitions,
evidence, bounded assistance.

Excel becomes reporting after a controlled transition.

Every handoff needs an owner and a next action.

Owner + receiver

Sender chases until accepted.

State

What is actually true now?

Entry, exit, pause

Explicit conditions and holds.

Blocker + next action

Named action and update owner.

Evidence version

Reopen dependent reviews.

Decision + reason

Authority, rationale, history.

Sent ≠ accepted. Completed ≠ handed over.

One home shows the journey we still need to prove.

1 Resolve

Conflicting evidence.

Named resolver.

→

2 Agree

Scope, resident choice,

funding, capacity.

→

3 Deliver

Inspect work.

Return defects.

→

4 Accept

Resident handover.

Finance closes separately.

Hold / return → named, competent human owner

Illustrative exercise journey — not an executed end-to-end customer outcome.

A resident is not a scheduling variable.

Resident

Clear options.
Safe phone, letter or assisted route.
Measure-specific choice.

Delivery

Committed crew, competence, materials and named liaison.

Preferences ≠ consent. Silence/no-access ≠ refusal.

Human hazard route — never wait for AI.

Show the decision trace, not just an AI explanation.

Know

Source + evidence version + unknowns.

Decide

Rule + result + reviewer + reason.

Change

Authority + dependent re-review + preserved history.

New source ≠ approved new policy.

One workbench beside the systems you keep.

Existing sources

Housing / repairs

Documents / spreadsheets

Source owners retain authority.

→

Shared case

Validated intake

Versions + owned work

No uncontrolled write-back.

→

People + channels

Role queues

Supported resident routes

Scoped supplier exchange.

Target context — links proposed, not all delivered. Excel reports.

Let models propose; keep decisions on the controlled path.

PROPOSAL PATH / observed operator integration; staff acceptance open

Request → API

Permitted task.

Snapshot → model

Bounded proposal.

Human review

Verify sources first.

SEPARATE CONTROLLED PATH / authority remains with people and rules

Authorized action

Effective authority.

Deterministic gates

Holds + evidence.

SQL + audit

Controlled write.

Model cannot approve, send, book, pay or clear a hold.

Five real proposal paths. No delegated decisions.

OBSERVED

5 distinct ready proposals
5 real calls · 6,884 tokens
15 ledger events

Controlled state unchanged;
proposal contents survived restart.

STILL TO PROVE

Staff browser/API + roles
Human source verification
Semantic correctness + value

Current authority absent.
Proactive OFF; gates OPEN.

Recorded operator-service proof · 14 October · image05 / e0254cb3 · revision12

Synthetic baseline: 980 cases / 38 visits / 11 private staff bindings. No identity details.

Five assists. One controlled journey.

Workflow controls progression. People retain decisions. | Design + implemented contracts; proactive OFF.

Choose homes	Assess & design	Prepare funding	Coordinate works	Verify & hand over
Assets: policy; data owners: verify	Assessor/coordinator: independent sign-off	Finance: validate, approve, submit	Resident: choice; Programme: release	Independent quality authority: accept
Stock Prioritisation	**Assessment Preparation**	**Grant & Funding Evidence**	**Works & Resident Coordination**	**Quality Evidence Review**
On request Explain facts; query conflicts	**On request** Prepare sourced survey/design pack	**On request** Draft source-linked evidence pack	**On request** Draft update; suggest crew slots	**On request** Assemble evidence; raise gaps
Trigger • OFF Missing/conflicting stock facts	**Trigger • OFF** Missing/changed survey or design	**Trigger • OFF** Missing inputs or changed terms	**Trigger • OFF** Unaccepted handoff; overdue update	**Trigger • OFF** Missing/conflicting quality evidence

Workflow core: rights • versions • gates • human approvals • audit • retries • manual recovery

Checks OFF now; future eligibility → named human queue. Funding: application ≠ award ≠ claim ≠ cash.
Hazard → human service now, never wait for AI. Value remains a hypothesis.

See cash before optimism.

FICTIONAL EXA-010/015 / not a workbench price or award

BEFORE GRANT RECEIPT **£20,000 gross base cash**

IF RECEIVED

£7,500 fictional grant

→ £12,500 provider base.

IF CONTINGENCY SPENT

£22,000 gross exposure

£14,500 provider exposure.

Application ≠ award ≠ claim ≠ cash.

Make the first change small enough to learn.

Co-design tasks

Programme + workbook owners.

Shadow one-way import

Data owners: reconcile + quarantine.

Supported task walkthroughs

Team leads: help + observe.

Controlled switch and rollback

Digital + work owners: exit tests first.

Proposed owners. No permanent dual entry. No compulsory portal.

Prove the programme. Test the AI separately.

Programme comparison

Matched existing teams.
Frozen cohort; same events.
Accepted handovers +
whole-chain cost.

Paired task comparison

Same inputs: manual/rules
versus assistance.
Quality, net human effort,
latency and cost.

Include unfinished/withdrawn homes. Protect safety, choice, quality, equity + cash.

Earn the next gate; do not repeat the last proof.

1 Confirm

Requirements, owners, authority.

2 Accept

Real staff/session, source review, roles, accessibility.

3 Compare

Semantics, net effort, cost, recovery.

4 Decide

Continue, simplify or stop.

Recorded operator proof is an input — not production approval.

Endorse the next evidence proposal.

CEO / Assets

Sponsor + accountable owners.

CIO / Programme

Human, permission and recovery evidence.

CFO

Whole-life affordability

- scoped authority review.

Agree the return date and stop tests.

No new procurement, spending, rollout or production authority.

Technical challenge: bounded does not mean fully assured.

State

Versions, fenced attempts, reservations.

Content restart observed.

Trust

Permitted sources, current role checks, independent review.

Real-session assurance open.

Operate

Owned manual path.

Performance, restore, quality and unit cost open.

Decision 1 is separate from the five new GPT proposal calls.

Council challenge: the objections we welcome.

Why not improve Excel?

Test equal scope and controls.

Why not launch now?

Human, semantic and value gates open.

What budget?

No new commitment; whole-life appraisal.

What if AI fails?

Manual workflow remains; simplify.

Unknown answers get an owner and evidence route, not a confident guess.

Read the evidence label before the claim.

Request + research

Request ≠ result. Research instruments ≠ residents.

Exercise fixtures

Fixtures ≠ company performance or budgets.

Observed proof

Operator proof ≠ human, semantic or value acceptance.

As at 14 October. Legal currentness not refreshed.

Live pitch, rehearsal and thought-leadership evidence still required.

Compare equivalent routes before selecting a winner.

	Improve current workflow	Greenfield business platform	Azure-led hybrid
Mandatory controls	To verify	To verify	To verify
Transition + access	To test	To test	To test
Support + recovery	To test	To test	To test
Whole-life cost	To price	To price	To price

Equivalent-scope evidence still needed — no winner scored.
